Given the complexity of the tasks of targeted, guaranteed emergency population warning about air raids during the large-scale RussoUkrainian war, Ukrainian enterprises «BEESOFT», «FALCON-M» and «OZON S» founded the consortium «CIVIL DEFENSE», combining their comprehensive experience in implementing software and hardware solutions to ensure the safety of the population in emergency situations.

The consortium «CIVIL DEFENSE» develops, manufactures, puts into operation and provides technical support of regional and local automated centralized emergency warning systems. The system's software and hardware complex includes indoor public space loudspeaker warning units, outdoor stationary and aircraft drone loudspeaker warning units, integration devices of TV and radio broadcasting networks for emergency warning systems, integration devices for advertising and information boards, as well as integration devices for loudspeaking and alarm systems. The specialists of the consortium have developed innovative organizational and technical solutions based on cloud computing to ensure the sustainability of warning systems during the large-scale war aiming at:

- rapid air raid warning of civilians in the immediate vicinity of the vast front line;
- continuous work during massive long-term electricity supply blackouts;
- resistance to specialized targeted attacks of Russians on data transmission networks, including GSM communication channels;
- defense against direct bombing of the areas where outdoor loudspeaker warning units are installed.

EDUCATIONAL AND SCIENTIFIC INSTITUTE OF AEROSPACE TECHNOLOGIES OF KPI NAMED AFTER IGOR trains specialists for the aerospace industry. For these purposes, it is necessary to create satellites and launch them into space. Several countries of the world that profess the so-called New Space concept are engaged in this. Ukraine should join them. Our main partner at the moment, the Firefly company (USA), will carry out the first launches of its own rockets this year.

The company professes the New Space strategy — accessible space through the use of technical innovations. They have already conducted fire tests of their engine. Two rockets have already been developed — «Alpha» and «Beta». So the company is also interested in rocket engineers. Currently, the Institute trains specialists in two specialties. The first is specialty No. 134 «Aviation and rocket and space technology». The second specialty is No. 173 «Avionics» with an educational program — «Aircraft and Complex Control Systems».

Expertus Okhorona Pratsi (Expertus Occupational Safety) is one of the directions of the Ukrainian digital publishing house Expertus. We create specialized digital products and publications for occupational safety professionals. We combine legislation and practice, the expertise of Ukrainian specialists, and global technologies.

- The «Occupational Safety Specialist's Guide» magazine delivers clear, practical answers to complex questions — in a language that's easy to understand.

- The Expertus Occupational Safety system gives you access to a comprehensive database of high-quality professional content. We collaborate with certified specialists, auditors, State Labor Service representatives, lawyers, and attorneys to deliver only verified and practical solutions.

An important part of our work is the Higher School of Occupational Safety, which offers three specialized programs:

- Professional Certification of Occupational Safety Specialists — 2025

- Fire Safety in the Workplace

- Enterprise Civil Protection System — 2025

These programs empower professionals to reach the highest standards, streamline preparation for State Emergency Service inspections, implement fire safety protocols, and develop all required documentation. Our experts from all over Ukraine are always by your side — whenever you need accurate, practical solutions.

Hobbit House» LLC is an innovative Ukrainian construction company and a member of an industrial group with over 70 years of experience in the production of reinforced concrete products.

The company's primary specialization is the manufacture of fortified modular reinforced concrete structures for both civil and military use. This project is implemented in collaboration with manufacturing plants in Kyiv, Kharkiv, Lviv, Zhytomyr, and Vinnytsia.

Prior to Russia's full-scale invasion of Ukraine, the company designed specialized structures in the «hobbit-style» for individual and corporate clients. However, since the start of the war, it has rapidly pivoted to the production of high-quality reinforced concrete shelters.

For instance, the «Fortress» (Fortetsya) type shelter is certified as an above-ground protective structure. The design underwent field testing at a proving ground, successfully withstanding direct hits from a T-72 tank's 125mm cannon using high-explosive fragmentation.

ShannonMechanics has been working for Ukraine's Victory since 2014. We were the first in Ukraine to create YUTA plastic stretchers and BM SPLINT splints, which have become a standard in tactical medicine. From the very first days of the full-scale invasion, we restored production, built logistics systems, and trained volunteers. Our mission is to save the lives of soldiers, transform the approach to tactical medicine, and create expertise that will one day be adopted by armies around the world.

BloodSaver is a line of ukrainianhemostatic products designed to quickly and reliably stop bleeding. We deliberately focus on thoughtful formats adapted for combat and civilian first aid kits for different conditions and needs:

- N-folded hemostatic bandages of various lengths and thicknesses;
- hemostatic wipes for non-critical wounds;
- training bandages for teaching and practicing tamponade skills.

BloodSaver hemostatic products instantly come into contact with blood and start the process of forming a thick layer. A few minutes after contact with the hemostatic, a dense plastic thick layer is formed, which helps to effectively stop bleeding and reduce blood loss. The results of clinical studies and practical application have shown that the product is safe for humans:

- does not damage tissue;
- does not penetrate the bloodstream;
- does not cause thrombus formation;
- can be safely removed from the wound.
